

Esusu rent reporting is a **scalable ESG solution** for the multifamily industry

Our platform is a meaningful and differentiated amenity that contributes to asset performance, resident wellbeing, and your overall social impact.

Esusu is the "S" in ESG

Less than 10% of renters use rental payments as a credit building tool. Esusu integrates with your existing rental payment technology to report payments to the credit bureaus and boost residents' credit. A partnership with us can help improve your social impact efforts and building performance in three principle areas:

Measure and report social impact metrics

Access to your portfolio's social impact data for use in investor letters, ESG reports, and in some cases, ratings, rankings, and regulatory commitments.

Meet your company's DEI objectives

Rent reporting helps fix systemic financial inequalities faced by renters and communities of color. Esusu is also diverse-founded and owned, helping reach vendor DEI goals.

Make a case for purposeful profit

Our platform is a meaningful and differentiated amenity that contributes to asset performance, resident wellbeing, and your social impact.

The social impact data you need

With increased demand for ESG data Esusu can set you apart. We report on the metrics that matter most.

Rent reporting metrics:

- # of residents enrolled in rent reporting
- # of credit scores established for the first time
- Average credit score increase
- % of renters who have improved credit

Housing stability metrics:

- # of residents that avoided eviction
- Total \$ loans distributed for rent relief
- Cost of evictions prevented

About Esusu

We're the leading financial technology platform that leverages data solutions (through rent reporting, property management analytics, and rental payment assistance) to empower residents and improve property performance.
